About

Agent Skills Finder & Builder is an agent skills finder for discovering, comparing, collecting, and installing Claude, Codex, and OpenClaw skills from one searchable library. It centralizes published skills so you can browse by workflow, problem, author, category, or description, then open the skill details before you install anything. The app also surfaces hot skills and collection views, making it easier to judge traction before you save a skill or add it to your workflow.

What is Agent Skills Finder & Builder

Agent Skills Finder & Builder is an **agent skills finder** and builder-oriented library for

describes itself as a searchable skill library and marketplace with published skills, collection tools, and one-click install flows. Instead of hunting through scattered repos or copying files by hand, the **agent skills finder** gives you a place to inspect real skill details first.

The library shows published skills, hot skills, and collection-oriented browsing. The source material says there are about 3K published skills, and the interface highlights updates, favorites, traction, and GitHub momentum. That makes the **agent skills finder** useful when you want a broader view of what is available before you install anything.

Key features

This **agent skills finder** focuses on discovery and lightweight curation rather than deep editing alone.

- Search by workflow, problem, author, category, or description.
- Open skill detail pages before installing, so you can review what a skill does.
- Browse hot skills to start with stronger proof signals such as favorites and traction.
- Collect skills into groups for later review.
- Install skills with one click, according to the site's own summary.
- Explore skills for Claude, Codex, and OpenClaw in one library.

The app's listings show practical examples like frontend design, skill authoring, video editing, PDF processing, access control, design systems, and frontend development. That range suggests the **agent skills finder** is aimed at both general users and builders who need task-specific agent instructions.

How to use it

Using this **agent skills finder** is straightforward, but the workflow matters if you want good results.

- Start with a keyword that matches your intent, such as a workflow, problem, category, or author.
- Scan the search results and open the full skill details instead of installing from the list alone.

Add useful skills to your collection so you can compare them later.

Install the chosen skill with the one-click flow when you are confident it fits your task.

If you are building an internal skill library, the **agent skills finder** can also help you study how existing skills are structured and named before you create your own.

Who it is for

This **agent skills finder** is a fit for people who work with agent workflows and want better organization around reusable skills.

Claude users who want a searchable way to find skills.

Codex users who need a broader skill catalog.

OpenClaw users looking for a shared library.

Builders who maintain or author skills and need examples.

Teams that want to compare skills by category, author, or traction signals.

It is especially useful if you prefer browsing a skill library before installing, because the **agent skills finder** emphasizes review-first discovery rather than blind import.

What to know before you use it

This **agent skills finder** is a discovery and install layer, not a guarantee that every skill is correct, current, or production-ready. The site shows published skills and traction signals, but those signals are only as reliable as the underlying community activity and repository data.

A few caveats matter:

The source does not list pricing, so cost is unknown.

The site mentions one-click installation, but the exact install target and supported environments are not fully documented in the harvested material.

Skill quality varies by author, and a high signal count does not prove the skill is right for your use case.

If a skill affects security, authentication, or production workflows, check the upstream repository, docs, or official vendor guidance before relying on it.

> For critical tasks, treat the **agent skills finder** as a starting point, not the final source of truth.

Used well, the **agent skills finder** saves time by helping you shortlist useful skills faster, but you should still verify the skill content before you install it into a live workflow. That final check is the safest way to use an **agent skills finder** in real projects.

FAQ

- What does Agent Skills Finder & Builder do?
- Can I search skills by specific criteria?
- Does it support one-click installation?
- Is Agent Skills Finder & Builder free?
- Does the app support one-click installation?
